

EDUCATION

National Polytechnic Institute (ESCOM- IPN) B.E. in Computer Systems.

Graduating in December 2026

EXPERIENCE

Software Engineer Intern - Microsoft **Redmond WA** **Jun 20256 – Sep 2026**

Built an **AI-powered internal tool** that automated server traffic rerouting for multiple internal teams, streamlining a previously manual and error-prone dashboard process.

- Developing an **AI-powered** security agent using **Microsoft SRE** Agent to detect unknown outbound domains from Kusto telemetry and automate firewall allowlist review workflows for security teams.
- Designing **AI tools** that enable the agent to query outbound request data, invoke internal domain-scanning services, retrieve prior approval signals from Microsoft teams, and interact with the firewall rules repository.
- Building an end-to-end, human-in-the-loop workflow that generates evidence-backed pull requests containing proposed firewall rule changes, domain risk findings, and historical approval context for security engineer review.

Software Engineer Intern – Uber **San Francisco CA** **Oct 2025 – Jan 2026**

Worked on **Android** reliability and UI tooling for the Uber Driver app. Built internal debugging infrastructure to detect latent ANRs and contributed to Uber’s internal component preview system using internal architecture.

- Developed an **Android watchdog** to detect latent ANRs in debug mode, capturing stack traces for reliability insights.
- Used **Android thread pools** and applied **Factory, Plugin Factory, and Dependency Injection** patterns for modular design.
- Prototyped ANR surfacing in **Jetpack Compose** and finalized a lightweight **Toast-based** implementation.
- Built a new **Components Preview** tab in Uber’s internal Android Styles app.

Software Engineer Intern - Microsoft **Redmond WA** **Jun 2025 – Sep 2025**

Built an **AI-powered internal tool** that automated server traffic rerouting for multiple internal teams, streamlining a previously manual and error-prone dashboard process.

- Designed and deployed an **MCP** server in **Azure Container Apps** using **Docker** and SSE, enabling scalable and real-time communication.
- Integrated a **GPT-4** model via **Azure AI Foundry** with **Semantic Kernel (C#)** to process natural language prompts and generate data previews.
- Developed a **Blazor + Fluent UI** chat interface, reducing workflows **from over 30 minutes to under 1 minute**.

Software Engineer - Bullmedia **Mexico City** **Jan 2025 – Jun 2025**

Built and deployed **full-stack** internal analytics systems with microservices in **NodeJS, Kubernetes, Docker, React, and MongoDB** to automate driver data processing and improve decision-making.

- Developed an analytics dashboard integrating Uber’s **APIs**, replacing manual workflows for **+1,000 drivers**.
- Designed a database managing **+200K** monthly trip and payout records, with **real-time** dashboards and reporting tools.

Software Engineer Intern - Uber **San Francisco CA** **Jun 2024 – Sep 2024**

Engineered a **dynamic, personalized driver checklist** that adapts based on completed objectives, improving onboarding engagement for new drivers.

- Designed **checklist logic and backend services in Go**, including **database migrations** and **internal query handling** to support dynamic item generation.
- Built the **UI with internal tools**, providing **step-by-step guidance** for each checklist item and configuring event triggers for real-time updates.
- Conducted **unit and integration tests**, collaborating with **cross-functional teams** to ensure smooth integration with the driver app.

Research Assistant – University of Arizona **Remote** **Feb 2024 – May 2024**

Developed **web scraping** projects of Latin American newspapers aimed at gathering political news to feed an AI model named **ConfliBERT**. Collected **+1.5GB** of structured political news data through custom web scrapers.

- Utilized **Python** as the primary language for developing **web scraping** scripts, leveraging libraries like **Selenium** and **Beautiful Soup** for web navigation automation and **data extraction**.
- Worked **autonomously** and **collaboratively** with the **research team** to identify relevant data sources and design effective web scraping strategies.

Mobile Developer Intern - TELCOPS **Remote** **Dec 2023 – Jun 2024**

Developed **mobile** applications using **Kotlin** as the primary language and **Android Studio** as the development environment, focusing on applications that significantly enhanced asset management processes.

- Utilized modern technologies such as **Android Jetpack** to optimize and enhance the performance of applications.
- Worked in an **agile environment**, applying methodologies like **Scrum** for efficient project management, focusing on continuous improvement, and achieving set objectives collaboratively with my teammates.

SKILLS

- **PROGRAMMING LANGUAGES:** Java (4 years), C++ (3 years), JavaScript (3 years), Python (2 years)
- **TECHNOLOGIES:** Git, Github, Android Studio, NodeJS, ReactJS, Linux, Bootstrap, HTML, CSS, Django Framework, Flask, MySQL, Google Cloud, Azure.
